

Emily Brunner Holly

Ilex 'Emily Brunner'

Height: 20 feet

Spread: 15 feet

Sunlight:

Hardiness Zone: 6b

Description:

This handsome holly is suitable for use as a screen with its tidy, columnar habit; splendid rich, dark green, glossy leaves and large red fruit in winter make this a great addition

Ornamental Features

Emily Brunner Holly is primarily grown for its highly ornamental fruit. It features an abundance of magnificent red berries in late fall. It has attractive dark green evergreen foliage. The spiny oval leaves are highly ornamental and remain dark green throughout the winter.

Landscape Attributes

Emily Brunner Holly is a dense multi-stemmed evergreen tree with a distinctive and refined pyramidal form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds and bees to your yard. It has no significant negative characteristics.

Emily Brunner Holly is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- Naturalizing And Woodland Gardens

Planting & Growing

Emily Brunner Holly will grow to be about 20 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more.

This tree does best in full sun to partial shade. It prefers to grow in moist to wet soil, and will even tolerate some standing water. It is particular about its soil conditions, with a strong preference for rich, acidic soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
