

Carla Broom
Cytisus 'Carla'

Height: 5 feet

Spread: 5 feet

Sunlight: ○

Hardiness Zone: 4b

Description:

A high quality flowering shrub for difficult places with dry, infertile soil, excellent for use in massing; bright red, white and pink flowers in spring in a densely branched, twiggly mound; best used in specific landscape situations

Ornamental Features

Carla Broom is blanketed in stunning red pea-like flowers with pink overtones and gold centers along the branches from mid spring to early summer. It has emerald green deciduous foliage. The grassy leaves do not develop any appreciable fall color. The smooth bark and lime green branches add an interesting dimension to the landscape.

Landscape Attributes

Carla Broom is an open multi-stemmed deciduous shrub with a shapely form and gracefully arching branches. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a high maintenance shrub that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

Carla Broom is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Carla Broom will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years.

PLANT FINDER

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is particular about its soil conditions, with a strong preference for clay, alkaline soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
